

Topic 1:

Course Background

(or: Why You're Here, and What You Learned to Get Here)

Background – CSc 144 v1.0 (McCann) – p. 1/31

What Is Discrete Math?

Definition: Discrete Mathematics

.....

Contrast this with ‘the calculus,’ which was developed by Newton and Leibniz to study objects in motion. As a result:

- ‘The Calculus’ tends to focus on real values
- Discrete Mathematics tends to focus on integer values

Background – CSc 144 v1.0 (McCann) – p. 2/31

Sample Discrete Math Topics

Topics that fall under the umbrella of discrete math include:

- Integral Functions and Relations
- Sets
- Sequences and Summations
- Counting (Permutations/Combinations, etc.)
- Discrete Probability

To understand those, you also need:

- First-Order Logic
- Logical Arguments
- Proof Techniques
- ... and a fair amount of pre-calculus mathematics

Background – CSc 144 v1.0 (McCann) – p. 3/31

“But Why Do I Have To Take Discrete Math?”

Discrete Structures is an ACM/IEEE core curriculum topic

- See:

https://www.acm.org/binaries/content/assets/education/cs2013_web_final.pdf

DM topics underlie much of Computer Science, including:

- **Logic** → Knowledge Representation, Reasoning, Natural Language Processing, Computer Architecture
- **Proof Techniques** → Algorithm Design, Code Verification
- **Relations** → Database Systems
- **Functions** → Hashing, Programming Languages
- **Recurrence Relations** → Recursive Algorithm Analysis
- **Probability** → Algorithm Design, Simulation

Background – CSc 144 v1.0 (McCann) – p. 4/31

Topics You May Need To Review

- Mathematical concepts, including, but not limited to:
 - Fractions
 - Rational Numbers
 - Basics of Sets
 - Associative, Commutative, Distributive, and Transitive Laws
 - Properties of Inequalities
 - Summation and Product Notation
 - Integer Division (Modulo, Divides, and Congruences)
 - Even and Odd Integers
 - Logarithms and Exponents
 - Positional Number Systems

The Math Review appendix (available from the class web page) can help you review these topics.

Background – CSc 144 v1.0 (McCann) – p. 5/31

Notations for Sets of Values

\mathbb{Z}	All integers	$\{\dots, -2, -1, 0, 1, 2, \dots\}$
$\mathbb{Z}^+, \mathbb{N}^+$	All positive integers	$\{1, 2, 3, \dots\}$
$\mathbb{Z}^*, \mathbb{N}_0$	The non-negative integers	$\{0, 1, 2, 3, \dots\}$
\mathbb{Z}^{even}	Even integers	$\{\dots, -4, -2, 0, 2, 4, \dots\}$
\mathbb{Z}^{odd}	Odd integers	$\{\dots, -3, -1, 1, 3, \dots\}$
\mathbb{Q}	Rational numbers	$a/b, a, b \in \mathbb{Z}, b \neq 0$
$\overline{\mathbb{Q}}$	Irrational Numbers	$\{i \mid i \notin \mathbb{Q}\}$
\mathbb{R}	The real values	$\{\mathbb{Q} \cup \overline{\mathbb{Q}}\}$

Note: Avoid the term “natural numbers” and the plain \mathbb{N} .

Background – CSc 144 v1.0 (McCann) – p. 6/31

Commutativity

Background – CSc 144 v1.0 (McCann) – p. 7/31

Associativity

Background – CSc 144 v1.0 (McCann) – p. 8/31

Distributivity

Transitivity

Fractions

Rational and Irrational Numbers

Definition: Rational Number

Example(s):

A real number that is not rational is **irrational**.

Example(s):

Basic Set Operators (1 / 2)

1. **Union** (\cup): $A \cup B$ contains all elements of both set A and set B
2. **Intersection** (\cap): $C \cap D$ contains only the elements present in both sets C and D
3. **Difference** ($-$): $E - F$ contains only the elements of set E that are **not** also in set F

(**Note:** Take out the “not,” and you’ve got a definition for \cap)

4. **Complement** ($\overline{\square}$): Given a set G , $\overline{G} = U - G$

Note: $X - Y = X \cap \overline{Y}$

Background – CSc 144 v1.0 (McCann) – p. 13/31

Basic Set Operators (2 / 2)

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 14/31

Summation and Product Notation

$$\sum_{i=1}^5 2i = 2(1) + 2(2) + 2(3) + 2(4) + 2(5) = 30$$

where:

- Σ is the _____.
- i is the _____.
- 1 is the _____.
- 5 is the _____.
- $2i$ is the _____.

Background – CSc 144 v1.0 (McCann) – p. 15/31

Summation and Product Notation (cont.)

Switch Σ to Π (capital Pi) for multiplication:

Example(s):

Use parentheses to eliminate confusion:

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 16/31

Nested Summations and Products

Much like nested FOR loops.

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 17/31

Modulo and Divides

Integer Division \rightarrow quotients; Modulo \rightarrow remainders

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 18/31

Modulo and Divides (cont.)

Definition: Divides

.....

Example(s):

Congruences

Definition: Congruent Modulo m

.....

.....

(b is called the *base*, r is the *residue* or *remainder*, and m is the *modulus*)

Example(s):

Laws of Exponents

$$1. w^{x+y} = w^x w^y$$

$$2. (w^x)^y = w^{xy}$$

$$3. v^x w^x = (vw)^x$$

$$4. \frac{w^x}{w^y} = w^{x-y}$$

$$5. \frac{v^x}{w^x} = \left(\frac{v}{w}\right)^x$$

Background – CSc 144 v1.0 (McCann) – p. 21/31

Laws of Logarithms

The connection between exponents and logarithms:

$$\text{If } b^y = x, \text{ then } \log_b x = y.$$

For each of the following laws, $a, b > 0$ and $a, b \neq 1$:

$$1. \log_a x = \frac{\log_b x}{\log_b a}$$

$$2. \text{If } m > n > 0, \text{ then } \log_b m > \log_b n$$

$$3. b^{\log_b x} = x$$

$$4. \log_b(x^y) = y \log_b x$$

$$5. \log_b(xy) = \log_b x + \log_b y$$

$$6. \log_b\left(\frac{x}{y}\right) = \log_b x - \log_b y$$

Background – CSc 144 v1.0 (McCann) – p. 22/31

Number Systems: Decimal

The Base 10 (a.k.a. Decimal, a.k.a. Arabic) System

- 10 symbols (glyphs): 0,1,2,3,4,5,6,7,8 and 9.
- In a string of symbols, each position is worth the product of the symbol's value and a power of 10, starting with $10^0 = 1$ on the right.

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 23/31

Number Systems: Binary

The Base 2 (a.k.a. Binary) System

- Just 2 symbols: 0 and 1.
- Each position is valued with increasing powers of 2.

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 24/31

Converting Decimal to Binary

1. Repeated divisions by 2

Example(s):

2. Sums of powers of 2

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 25/31

Number Systems: Octal

(Key point: Octal is based on groups of 3 binary digits)

The Base 8 (a.k.a. Octal) System

- 8 symbols: 0 through 7, inclusive
- Each position is valued with increasing powers of 8

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 26/31

Converting Octal to ...

... Decimal: Multiply digits by powers of 8:

Example(s):

... Binary: Convert digits to binary, and “degroup:”

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 27/31

Number Systems: Hexadecimal

(Key point: ‘Hex’ is based on groups of 4 binary digits)

The Base 16 (a.k.a. Hexadecimal) System

- 16 symbols: 0-9, inclusive, and A-F, inclusive
- Each position is valued with increasing powers of 16

Example(s):

Background – CSc 144 v1.0 (McCann) – p. 28/31

Why Hexadecimal Is More Common Than Octal

Background – CSc 144 v1.0 (McCann) – p. 29/31

What's The Secret Message?

“Foxtrot” from January 11, 2006:

Hint: Find an ASCII table!

Background – CSc 144 v1.0 (McCann) – p. 30/31

Remember!

The math review topics are used in this class, and direct questions about them will be asked on quizzes, Exam #1, and the Final Exam.

If you are not confident in your knowledge of them:

- Read Appendix A in “Kneel Before \mathbb{Z}^{odd} ,”
- Attend a Supplemental Instruction (SI) session, **and**
- Review and self-test the topics on your own!
